Our primary focus lies in cutting-edge power battery technology for new energy vehicles, energy storage applications, power transmission, and distribution equipment. As a technology-driven company, Gotion High-Tech is at the forefront of power battery research, development, and innovation.

Those changes make it possible to shrink the overall battery considerably while maintaining its energy-storage capacity, thereby achieving a higher energy density. "Those features -- enhanced safety and greater energy density -- are probably the two most-often-touted advantages of a potential solid-state battery," says Huang.

Several installations of second-life batteries as grid-scale storage have already been pursued. In 2014, Nissan created a 16-battery reuse project for a large energy storage system alongside a solar farm; starting in 2015, BMW deployed used EV batteries in a demand response pilot with Pacific Gas & Electric.

In addition to the turnkey CIGSfab production line in the Solar segment, the company focuses on the automotive industry in the Electronics and Energy Storage segments with economical and competitive equipment for the production of lithium-ion batteries - from the cell to the finished pack - and automated assembly lines for cell contacting systems.

An innovative figure in the history of car batteries, his findings introduced new possibilities for portable energy storage. Plant's lead-acid battery comprised two sheets made from pure lead, which played the role of positive and negative electrodes. He immersed these plates in a sulphuric acid solution which acted as an electrolyte.
