Prof. Dr.-Ing. Michael Sterner researches and holds courses on energy storage and regenerative energy industries at Regensburg University of Applied Sciences, and develops energy storage concepts for companies and municipalities. Together with colleagues, he previously launched the Power-to-Gas storage technology, which remains his chief research interest.

We estimate that by 2040, LDES deployment could result in the avoidance of 1.5 to 2.3 gigatons of CO₂ equivalent per year, or around 10 to 15 percent of today's power sector emissions. In the United States alone, LDES could reduce the overall cost of achieving a fully decarbonized power system by around \$35 billion annually by 2040.

Even though each thermal energy source has its specific context, TES is a critical function that enables energy conservation across all main thermal energy sources [5] Europe, it has been predicted that over 1.4 × 10¹⁵ Wh/year can be stored, and 4 × 10¹¹ kg of CO₂ releases are prevented in buildings and manufacturing areas by extensive usage of heat and ...
