Can biologically based energy storage be used to store renewable electricity?

Finally, as we discuss in this article, a crucial innovation will be the development of biologically based storage technologies that use Earth-abundant elements and atmospheric CO<sub>2</sub> to store renewable electricity at high efficiency, dispatchability and scalability.

Can biological systems be powered by electricity?

However, to directly power biological systems with electricity, electrical energy needs to be converted into ATP, the universal energy currency of life. Using synthetic biology, we designed a minimal "electrobiological module," the AAA cycle, that allows direct regeneration of ATP from electricity.

Can ATP and other biological energy storage molecules be produced continuously?

We show how ATP and other biological energy storage molecules can be produced continuously at -0.6 V and further demonstrate that more complex biological processes, such as RNA and protein synthesis from DNA, can also be powered by electricity.

What are the applications of biomimetic and biological energy conversion?

One area clearly in need of new technologies is biological and biomimetic methods of energy conversion. Within this broad area, focus was given to two specific applications: the conversion of solar energy into useful electrical or chemical energy and the production of power for in vivo medical devices.

Currently, the installed energy storage capacity in the US amounts to only ~ 1 GWh (0.0036 PJ) [10], while worldwide it stands at ~ 20 GWh (0.072 PJ) [11]. How could an increase in electrical energy storage of this size be achieved? No modern energy storage technology is perfect. Compressed air and pumped-hydro storage both have

The principle of storage of energy in thermal energy storage systems is conceptually different from electrochemical or mechanical energy storage systems. Here, the energy is stored by heating or cooling down appropriate materials using excess electrical energy. When required, the reverse process is used to recover the energy.
