The Future of Energy Storage report is an essential analysis of this key component in decarbonizing our energy infrastructure and combating climate change.

Should energy storage be co-optimized?

Storage should be co-optimized with clean generation, transmission systems, and strategies to reward consumers for making their electricity use more flexible. Goals that aim for zero emissions are more complex and expensive than net-zero goals that use negative emissions technologies to achieve a reduction of 100%.

Will Slovakia become part of international consortiums?

lity Slovakia to become part of international consortiums. Full automation of public and rail transportation systems should happen before individual transportation, where the goal is to flatten vehicle purchases. Rather than traditional vehicle ownership, the new trend follows a business model where a car is sold to

The development of energy management strategy (EMS), which considers how power is distributed between the battery and ultracapacitor, can reduce the electric vehicle's power consumption and slow down battery degradation.
