1. Introduction. With the development of society, energy consumption is increasing day by day [1] some developed countries, 40% of energy consumption is related to building energy consumption of which 60% are related to room thermal regulation systems such as heating, exhaust and refrigeration [2, 3]. The application of phase change materials (PCMs) ...

Within the last 25 years the share of renewable energy sources in electrical energy production in Germany has been rising considerably. The volatility of renewable energy sources results in an increasing mismatch between supply and demand of electrical energy creating the need for storage capacities. The storage of electrical energy via the detour of ...
