What is encryption & decryption?

Cryptography is the study of encryption and decryption [8]. To maintain data security, most apps, computers, and devices (through IoT) employ encryption in their communication. The data is encrypted using a secret key to create the ciphertext, which is then sent to the recipient.

How is a fixed payload encrypted and transmitted?

In this experiment, a fixed payload of 48 bytes is encrypted and transmitted using both AES and the proposed technique. Various key sizes and encryption modes, such as AES-ECB (Electronic Codebook), AES-CBC (Cipher Block Chaining), and AES-CTR (Counter Mode), are employed for encryption and transmission.

Can encrypting data reduce energy consumption?

The encryption technique employs energy optimization techniques to reduce energy consumption while encrypting the data. The paper explores the coordinate functions intrinsic to the AES round function. It proves that the coordinate functions within the AES round function achieve equivalence through an affine transformation of the input.

Why do we need a specialized encryption algorithm for IoT devices?

Because of the resource restrictions of IoT devices, they necessitate a specialized encryption algorithm that saves energy usage, accounts for limited accessible memory, and maintains a quicker response time [6]. Lightweight cryptosystems are the name given to these specific cryptosystems.

Why is encryption important for low-power IoT devices?

The performance of an encryption algorithm determines the efficiency and speed in terms of encryption time, throughput, and memory consumption. Furthermore, the power consumption in an encryption algorithm is an essential metric for low-power IoT devices.

Why are traditional encryption methods inefficient for IoT devices?

Classical encryption approaches and methods become inefficient for IoT devices due to memory limits. Large volumes of sensitive data are being transferred between devices as the Internet of Things (IoT) grows in popularity. This involves the implementation of security safeguards to ensure that unauthorized parties do not obtain access to the data.

Electrified railways are becoming a popular transport medium and these consume a large amount of electrical energy. Environmental concerns demand reduction in energy use and peak power demand of railway systems. Furthermore, high transmission losses in DC railway systems make local storage of energy an increasingly attractive option. An ...

Decryption of fixed energy storage device

TL;DR: In this article, a method for protecting content of a storage device including a memory for storing data and a controller for managing data input and output of the memory is provided, in which a Data Encryption Key (DEK) for encrypting the data stored in the memory was generated, an Identifier (ID) of memory is acquired, the DEK is encrypted using user secret information ...

Recently, owing to the high theoretical capacity and safety, zinc-ion energy storage devices have been known as one of the most prominent energy storage devices. In this paper two new ways for efficient secure outsourcing the decryption of key-policy attribute-based encryption ((KP-ABE)) with energy efficiency are proposed. Based on an observation about the permutation property of the access structure for the attribute based encryption schemes, we propose a high efficient way for outsourcing the decryption of KP ...

This algorithm encrypts created files even before they are physically written onto the device, rendering your storage drive "encrypted at rest." While there are many encryption algorithms, AES, the Advanced Encryption Standard, is one of the most widely adopted and recognized modern cryptographic algorithms.

Large-scale mobile energy storage technology is considered as a potential option to solve the above problems due to the advantages of high energy density, fast response, convenient installation, and the possibility to build anywhere in the distribution networks [11]. However, large-scale mobile energy storage technology needs to combine power transmission and ...
