Can hybrid energy be used to power a drilling rig?

In this article, the aim is to develop a model for efficient energy management using hybrid energy to power a drilling rig. This involves utilizing wind turbines and emergency generators, as well as charging battery storage systems with recycled energy from the depot through regenerative braking.

Can electric energy storage be used for drilling based on electric-chemical generators?

The article outlines development of an electric energy storage system for drilling based on electric-chemical generators. Description and generalization are given for the main objectives for this system when used on drilling rigs isolated within a single pad, whether these are fed from diesel gensets, gas piston power plants, or 6-10 kV HV lines.

Can a hybrid energy accumulation system be integrated into a rig power circuit?

The efficiency of using a hybrid energy accumulation design is proven; the design calls for joint use of Li-ion cells and supercapacitors, as well as three-level inverters, to control the storage system. The article reviews all possible options for connecting the system into a unified rig power circuit, and the optimum solution is substantiated.

What is a hybrid energy storage module?

Based on the research, a generic architecture of the energy storage module is developed, and an engineering prototype is built. The efficiency of using a hybrid energy accumulation design is proven; the design calls for joint use of Li-ion cells and supercapacitors, as well as three-level inverters, to control the storage system.

Can energy storage systems improve energy efficiency of DPS-powered rigs?

Based on average daily power consumption statistics and load diagrams for various rig operating modes at more than fifty pads equipped with DPS, it was proposed to improve the energy efficiency of individual DPS-powered rigs by introducing energy storage systems (Fig. 1).

How a drilling rig is powered by a diesel generator?

According to the conditions of drilling string movement, P1 power from the diesel generator was used to feed the drilling rig and P2 power was used to charge the battery bank. The power of P3 stored in the battery and hybrid energy will be fully able to supply the energy required by the drilling rig during low consumption hours.

Inverter Surge or Peak Power Output. The peak power rating is very important for off-grid systems but not always critical for a hybrid (grid-tie) system. If you plan on powering high-surge appliances such as water pumps, compressors, washing machines and power tools, the inverter must be able to handle the high inductive surge loads, often referred to as LRA or ...

The following sample Enphase Energy System diagrams help you design your PV and storage systems. 5.2.1 Solar PV only: Single-phase IQ7/IQ8 Series Microinverters System size: PV: 3.68 kW ...

Designed to optimize power generation, energy storage solutions such as the Hybrid Energy Management (hEMS) Systems are purpose-built to improve energy efficiency and reduce emissions. These energy storage solutions can be integrated with natural gas, dual-fuel, or diesel engines to optimize drilling operations by lowering fuel costs and ...

The rest of the paper is organized as follows: Section 2 reviews the literature related to the topic. Section 3 analyzes the energy of each stage of the drilling rig during the drilling and excavation process, establishes an EC model driven by mechanism and data hybrid, and proposes a multi-angle visualization analysis approach.

Evolution of Battery Energy Storage Systems (BESS) made them a pivotal asset to successfully deal with hybrid power systems with high Renewable Energy Sources (RES) penetration. This paper provides insights into BESS value proposition in terms of both power and energy management. Real plant data as well as simulation results obtained with dedicated tools are ...

Siemens Energy signed an agreement with Maersk Drilling to upgrade two ultra-harsh environment CJ70 jack-up drilling rigs in the North Sea with hybrid power plants using lithium-ion energy storage. The rigs - the Maersk Intrepid and Maersk Integrator - were retrofitted with BlueVault(TM) batteries from Siemens Energy.

Installation and testing of the energy storage system have been completed with close cooperation between Seadrill/Northern Drilling, Siemens, Kongsberg Maritime, and DNV GL. By using the four converter-battery systems, the operator estimates it will be able to reduce the runtime of the rig's on-platform diesel engines by 42%, cutting CO<sub>2</sub> ...

feature of a hybrid energy system. Recently, wind-storage hybrid energy systems have been attracting commercial interest because of their ability to provide dispatchable energy and grid services, even though the wind resource is variable. Building on the past report "Microgrids,

The power allocation principle of hybrid energy storage system in microgrid is generally as follows: low frequency fluctuation power component (0.01-0.1 Hz) is smoothed by energy-based energy storage lithium battery, high frequency fluctuation power component ( $>0.1$  Hz) is absorbed by power-based energy storage doubly-fed flywheel.
