Source: Korea Battery Industry Association 2017 "Energy storage system technology and business model". In this option, the storage system is owned, operated, and maintained by a third-party, which provides specific storage services according to a contractual arrangement.

Energy Storage Systems are structured in two main parts. The power conversion system (PCS) handles AC/DC and DC/AC conversion, with energy flowing into the batteries to charge them or being converted from the battery storage into AC power and fed into the grid. Suitable power device solutions depend on the voltages supported and the power flowing.
