

What is an optical storage and charging bi-directional inverter (BDI)?

To meet this need, Delta developed an optical storage and charging bi-directional inverter (BDI). This all-in-one solution integrates the conversion and control of AC and DC power for household electricity infrastructure, rooftop solar power, energy storage batteries, and EV charging.

How a bidirectional inverter improves your solar energy system?

The two operating modes of a solar energy system that has a bidirectional inverter. The black, solid arrows represent the flow of electricity. Broken lines are activated when the main power supplies (solar or utility) are lost. Now that you know how a bidirectional inverter improves your solar energy system let's summarize the benefits.

Can a bidirectional inverter be charged without a power adapter?

Products with bidirectional inverters can be charged without the need for a power adapter. They can be directly connected to AC wall outlets using a dedicated line for charging. When selecting an energy storage system, the presence of bidirectional inverters is a crucial consideration.

Should you buy a bidirectional inverter?

For us, a bidirectional inverter is for green energy consumers who put a ton of value on high-quality electricity 24/7. When shopping around for inverters, your main considerations should revolve around costs, power requirements, protection, and reliability. There are intangibles, too, like post-purchase service, warranties, and product reviews.

What is a bidirectional inverter?

Modern bidirectional inverters are built on modern MOSFET switch technology, which does two things for you: Compared to a basic inverter, bidirectional inverters also provide clean sine-wave outputs converting DC to AC. This means your electricity is clean (no harmonics) and won't cause trouble for your electronics.

Why should you use a bidirectional inverter during a power outage?

During an outage, a bidirectional inverter will immediately switch your power source from the AC outlet to your battery. This is the reason why bidirectional inverters are considered nowadays when it comes to Uninterruptible Power Supply (UPS) feature. However, you should take this information with a grain of salt.
