Battery Energy Storage System (BESS) containers are increasingly being used to store renewable energy generated from wind and solar power. These containers can store the energy produced during peak production times and release it during periods of peak demand, making renewable energy more reliable and consistent.

The integration of thermal energy storage (TES) systems is key for the commercial viability of concentrating solar power (CSP) plants [1, 2]. The inherent flexibility, enabled by the TES is acknowledged to be the main competitive advantage against other intermittent renewable technologies, such as solar photovoltaic plants, which are much ...

are currently two kinds of large-scale energy storage, i.e., pumped-hydro storage and compressed air energy storage (CAES), that can be installed at the grid scale. CAES is a high power and energy storage technology and has relatively low capital, operational, and maintenance costs [4].

Two kinds of M-TES system using a direct- /indirect- contact TES container have been built in Yan's laboratory to test their energy transfer and storage performance [10], [11], [12], [13]. Till now, for indirect-contact TES container in M-TES system, studies have been carried out on developing effective TES materials, as well as enhanced heat transfer from the ...
