What are P&Gems visual level indicators & tank level gauges?

P&Gems visual level indicators and tank level gauges are ideal for continuous indication of liquid level in storage tanks and vessels where visual indication at the tank is required.

What is the difference between a water level gauge and a mechanical level gauge?

Water level gauges - A water level gauge is used for measuring the rise and fall of water levels. Mechanical level gauges - A mechanical level gauge monitors levels of underground storage tanks. Level gauges take level readings using several different techniques. The measurement technology should be chosen based on the user's application.

What is a tank level gauge used for?

Tank level gauges - A tank level gauge is used in tank volume monitoring. Fuel level gauges - A fuel level gauge provides a direct fuel level reading for vehicles and equipment. The two main parts of a fuel gauge are the sender and the gauge. The sender measures the fuel level in the tank and the gauge displays the level to the user.

How do you measure a tank level?

For tank level measurement, inspection, or verification, use a thermal camera- a new type of liquid level measurement device. Sludge, liquid and gas are all visible in this thermal image of a large industrial tank. Exactly what the levels of each will look like relative to each other depends on where the material is in its temperature transition.

What are the different types of level gauges?

There are several basic types of level gauges. Examples include: Tank level gauges - A tank level gauge is used in tank volume monitoring. Fuel level gauges- A fuel level gauge provides a direct fuel level reading for vehicles and equipment. The two main parts of a fuel gauge are the sender and the gauge.

How does a fuel gauge work?

The two main parts of a fuel gauge are the sender and the gauge. The sender measures the fuel level in the tank and the gauge displays the level to the user. The sending unit measures the fuel once the float has dropped below a certain level. When the tank is full, the float is near the top and the wiper rests close to the grounded side.
