Thermal stores are highly insulated water tanks that can store heat as hot water for several hours. They usually serve two or more functions: Provide hot water, just like a hot water cylinder. Store heat from a solar thermal system or biomass boiler, for providing heating later in the day.; Act as a "buffer" for heat pumps to meet extra hot water demand.

Using lift equipment, position the battery assembly close to the wall and adjust the height of the battery assembly until its mounting cleats are just above the flanges on the bracket. Lower the battery assembly until the top cleat engages the top flange on the bracket and the bottom cleat aligns with the bottom flange.
