Does a flywheel cost more than a battery system?

If the facility determines that batteries are also needed in addition to the flywheel in order to increase runtime, the lifecycle cost of a flywheel system will exceed the total cost of a battery system. Even if batteries are not needed, the flywheel will need maintenance - including replacement of the internal bearing - which can also add cost.

Beacon Power is building the world's largest flywheel energy storage system in Stephentown, New York. The 20-megawatt system marks a milestone in flywheel energy storage technology, as similar systems have only been applied in testing and small-scale applications. The system utilizes 200 carbon fiber flywheels levitated in a vacuum chamber.
