Tarkett's vinyl flooring factory in Ronneby, Sweden, is using ABB data insights and service expertise to save 800 megawatt-hours (MWh) of energy per year from their motor-driven systems. This is around 1 percent of the site's total energy consumption in a year and is equivalent to the energy needed to charge 68 million smartphones for the ...

The current is the primary component defining the cost in low voltage AC drives. In formula (2.2) we see the term $\cos\phi$. This term defines how much motor current is used for magnetising the motor. The magnetising current does not create any torque and is therefore ignored. On the other hand, this motor magnetising current is not taken from the
