OverviewConstructionSafetyOperating characteristicsMarket development and deploymentSee alsoA battery energy storage system (BESS) or battery storage power station is a type of energy storage technology that uses a group of batteries to store electrical energy. Battery storage is the fastest responding dispatchable source of power on electric grids, and it is used to stabilise those grids, as battery storage can transition from standby to full power in under a second to deal with grid contingencies.

- Acts as a back-up power source Energy Storage can respond within milliseconds and supply power to maintain network continuity while the back-up generator is started and brought online. This enables generators to work at optimum power output, without the need to keep idle capacity for spinning reserves. This eliminates the need to have back-up
