Distributed energy resources may or may not use inverter technology to interface with the ac grid; however, they are distinctly different than BPS-connected inverter-based resources (connected to transmission and sub-transmission levels). NERC uses the term "inverter-based resource" to refer generally to BPS-connected facilities that have

Your existing system remains unchanged, except that when your utility goes down your grid tied inverter runs power through an added battery-based inverter connected to energy storage (batteries). This new inverter uses power stored in the battery bank to provide electricity to your home when utility power is unavailable.
