What is a power conversion system (PCS) / hybrid inverter?

The battery system within the BESS stores and delivers electricity as Direct Current (DC), while most electrical systems and loads operate on Alternating Current (AC). Due to this, a Power Conversion System (PCS) or Hybrid Inverter is needed. These devices are much more dynamic than standard inverters as they can convert power bi-directionally.

What is the EverVolt Energy Storage System?

The EverVolt Energy Storage System is a Full Energy Storage System for off-grid and grid-tied homes. It is available in AC- and DC-coupled versions*, both of which can be sized from 11 kWh to 102 kWh to provide continuous back-up power.

A hybrid inverter combines the functions of a solar inverter and a battery inverter in a single unit. Hybrid inverters cannot be connected to a system with microinverters or to a battery with an inverter integrated in the same unit. A hybrid inverter may be a good option if you are installing solar and a battery at the same time.

Types of Inverters. There are several types of inverters that might be installed as part of a solar system. In a large-scale utility plant or mid-scale community solar project, every solar panel might be attached to a single central inverter. String inverters connect a set of panels--a string--to one inverter. That inverter converts the power produced by the entire string to AC.
