

Light-year 0 energy storage density

Why should you buy a lightyear 0 battery pack?

Lightyear's integrated solar technology greatly reduces the need for grid-charging. Lightyear 0's design allows it to attain a record-breaking drag coefficient (Cd) of less than 0.175. A battery pack with a high energy density has a relatively low weight, which contributes to the energy efficiency of the car.

Is ultrahigh recoverable energy storage density a bottleneck?

However, thus far, the huge challenge of realizing ultrahigh recoverable energy storage density (W_{rec}) accompanied by ultrahigh efficiency (η) still existed and has become a key bottleneck restricting the development of dielectric materials in cutting-edge energy storage applications.

How much space does a lightyear 0 have?

No more planning routes around charging ports; Lightyear 0 is energised by adventure, just like you. 474L of trunk space with the seats up, and a ground clearance of 183mm makes it ideal for exploring unknown terrain and heading for off-the-beaten-track destinations.

What is energy density?

Energy density differs from energy conversion efficiency (net output per input) or embodied energy (the energy output costs to provide, as harvesting, refining, distributing, and dealing with pollution all use energy). Large scale, intensive energy use impacts and is impacted by climate, waste storage, and environmental consequences.

How does energy density affect energy storage?

For energy storage, the energy density relates the stored energy to the volume of the storage equipment, e.g. the fuel tank. The higher the energy density of the fuel, the more energy may be stored or transported for the same amount of volume. The energy of a fuel per unit mass is called its specific energy.

How does Lightyear 0 work?

Designed like no other electric car, Lightyear 0 charges on-the-go and gains up to 70 kilometres of range per day from the sun alone. Our holistic design helps to get the most from every last joule of energy. With Lightyear 0, the sun is your source. Picture this: you return to your car after two hours.
