e) A backup system is also included with the hybrid solar inverter. This is usually a battery. As long as more energy is available, it assists the inverter in storing energy in the battery. This energy can be used when needed. As a result, in an emergency, it can offer energy.

How do hybrid inverters work?

Most hybrid inverters can be programmed to function in four different modes: Hybrid mode - Stores excess solar energy during the day to be used in the evening to increase self-sufficiency. Off-grid mode*- Operates much like an off-grid inverter and uses excess solar to charge the battery and power the loads without a grid connection.

What is a solar hybrid grid-tie inverter?

By combining these functions into a single device, a solar hybrid grid-tie inverter streamlines and improves the operations of the classic solar inverter. Even better, since the amount of solar power available may depend on weather and seasonality, the hybrid inverter can draw power from the grid to charge your battery storage system if needed.
