Flywheel Energy Storage Systems (FESS) work by storing energy in the form of kinetic energy within a rotating mass, known as a flywheel. Here's the working principle explained in simple way, Energy Storage: The system features a flywheel made from a carbon fiber composite, which is both durable and capable of storing a lot of energy.

But how exactly does a dry cabinet work to protect these valuable items from moisture and humidity? At its core, a dry cabinet operates on the principle of controlling the humidity level within an enclosed space. It creates a low humidity environment by removing excess moisture from the air, ensuring the preservation and longevity of stored items.
