

where W_1 is the energy storage density, ϵ_0 is the dielectric constant of free space (8.854×10^{-12} F/m), ϵ_r is the dielectric constant of materials and E is applied electric field (kV/cm). In addition, the occupation of Li^+ and La^{3+} ions in A-sites tend to shrink the lattice owing to the formation of oxygen vacancies and smaller ionic sizes of Li^+ and La^{3+} than those of Na^+ ...

Among the several lead-free materials, sodium bismuth titanate $\text{Bi}_{1/2}\text{Na}_{1/2}\text{TiO}_3$ (NBT), could be a good candidate for lead-free ceramics in view of its high Curie temperature ... High energy storage density and optical transparency of microwave sintered homogeneous $(\text{Na}_{0.5}\text{Bi}_{0.5})_{1-x}\text{Ba}_x\text{Ti}_{1-y}\text{Sn}_y\text{O}_3$ ceramics. ACS Sustain. Chem.

Structure and dielectric properties of double A-site doped bismuth sodium titanate relaxor ferroelectrics for high power energy storage ... The composition $(\text{Ba}_{0.4}\text{Sr}_{0.6})_{0.5}(\text{Bi}_{0.5}\text{Na}_{0.5})_{0.5}\text{TiO}_3$ was found to exhibit the maximum recoverable energy storage density, with a value of 1.618 J cm^{-3} and 76.9% storage efficiency at a field of ...

Here, we show that in the bismuth sodium titanate (BNT)-based composition $0.2(\text{Ba}_{0.4}\text{Sr}_{0.6}\text{TiO}_3)-0.8(\text{Bi}_{0.5}\text{Na}_{0.5}\text{TiO}_3)$, this model does not accurately describe the structural situation. Such BNT-based systems are of ... from actuators,¹⁻⁴ to energy storage capacitors,⁵⁻⁷ nonvolatile memory devices,⁸⁻¹¹ and tunable communication ...

Pure bismuth sodium titanate (BNT) piezoceramic was reported in 1960. Pure BNT has a rhombohedral structure. ... sensors, actuators, and transducers with different purposes such as energy harvesting, strain sensor, active vibration reduction, ultrasonic sonar, distance meter, and other applications. PZT is one of the most used piezoceramics ...

DOI: 10.1016/j.jmat.2022.02.003 Corpus ID: 246806486; Sodium Bismuth Titanate-Based Perovskite Ceramics With High Energy Storage Efficiency and Discharge Performance @article{Wang2022SodiumBT, title={Sodium Bismuth Titanate-Based Perovskite Ceramics With High Energy Storage Efficiency and Discharge Performance}, author={Jiahui Wang and ...

Significantly enhanced energy storage density in sodium bismuth titanate-based ferroelectrics under low electric fields. Author links open overlay panel Jintao Zhang a, Ying Lin a, Lei Wang b, ... Note that, the energy-storage properties with an excellent W_d of 3.24 J cm^{-3} and high energy-storage efficiency ...

In this work $(0.85-x)\text{Na}_{0.5}\text{Bi}_{0.5}\text{TiO}_3-0.15\text{NaNbO}_3-x\text{Sr}_{0.85}\text{Bi}_{0.1}\text{TiO}_3$ ceramic system abbreviated as (NBT-NN-xSBT) was prepared through the conventional solid-state method. The effect of doping level on crystal structures, microstructures, dielectric, and energy-storage properties were investigated in-detail. The

coexistence of rhombohedral (R3C) and ...

In particular, extremely high stored energy storage density (6.92 and 5.37 J/cm³), high recoverable energy storage density (4.77 and 4.37 J/cm³), and moderate efficiency (69.0% and 81.4%) were achieved in both the samples of $x = 0.12$ and $x = 0.15$, respectively.

Lead-free dielectric ceramics can be used to make quick charge-discharge capacitor devices due to their high power density. Their use in advanced electronic systems, however, has been hampered by their poor energy storage performance (ESP), which includes low energy storage efficiency and recoverable energy storage density (W_{rec}). In this work, ...

DOI: 10.1016/j.cej.2023.145363 Corpus ID: 260857374; Energy storage properties of samarium-doped bismuth sodium titanate-based lead-free ceramics @article{Tang2023EnergySP, title={Energy storage properties of samarium-doped bismuth sodium titanate-based lead-free ceramics}, author={Xuyao Tang and Zimeng Hu and Vladimir Koval and Bin Yang and ...

In the present work, lead-free 0.94Bi_{0.5}Na_{0.5}TiO₃-0.06BaTiO₃ (abbreviated as BNT-6BT) ceramics doped by 2.5 mol% of Sm was prepared by the conventional ceramic route and characterized for the piezoelectric and energy storage properties. The Sm substitution includes the replacement of Bi, Na and both the Bi and Na ions in the BNT lattice. Accordingly, ...

The incorporation of Dy³⁺ into Sodium Bismuth Titanate (Na_{0.5}Bi_{0.5}TiO₃) matrix allows a substantial decrease of the coercive field, ... The energy storage density and the energy storage efficiency for the 2DyNBT and 5DyNBT ceramics in the range of 25-200 °C are shown in Fig. 7 (d).

Sodium bismuth titanate (NBT) and its solid solutions with other ABO₃ perovskites are of great interest for lead-free ferroelectric and piezoelectric applications. In this article, we provide an introduction to the complex structure of NBT, including atomic displacements and nanoscale defects. We also review poling effects and properties as well as ...

Here, we show that in the bismuth sodium titanate (BNT)-based composition 0.2(Ba_{0.4}Sr_{0.6}TiO₃) ... to energy storage capacitors, nonvolatile memory devices, and tunable communication devices, owing to their distinctive reversible polarization behavior under external electric fields. The establishment of the ferroelectric state involves ...

Energy-storage capacitors based on relaxation ferroelectric ceramics have attracted a lot of interest in pulse power devices. How to improve the energy density by designing the structure of ceramics through simple approaches is still a challenge. Herein, enhanced energy-storage performances are achieved in relaxation ferroelectric 0.9 (0.94Na_{0.5}Bi_{0.5}TiO₃) ...
