Abstract: Under the background of carbon neutrality, it is necessary to build a new power system with renewable energy as the main body. Power-side energy techniques receive attention because they are important means of remitting large-scale renewable energy grid-connected pressure. They could smooth generation output of intermittent renewable ...

With the development of advanced electronic devices and electric power systems, polymer-based dielectric film capacitors with high energy storage capability have become particularly important. Compared with polymer nanocomposites with widespread attention, all-organic polymers are fundamental and have been proven to be more effective choices in the process of scalable, ...

Storage estimates dropped from 18 years to only six months, triggering an emergency well intervention to find a temporary solution. Snøhvit's unexpected development forced Equinor to prospect for new CO₂ storage areas, and in 2016, it invested in another injection site as part of a US\$225 million capital expenditure campaign to improve ...

The impedance experiments performed at various potentials offer some light on the charge storage mechanism. For power electronic applications, Lambert et al. [52] employed AC analysis to compare SCs and LICs. Lambert demonstrated that the LIC is well-suited for power electronic applications than other established technologies, as it can sustain ...
