What is thermal energy storage?

Thermal energy storage could connect cheap but intermittent renewable electricity with heat-hungry industrial processes. These systems can transform electricity into heat and then, like typical batteries, store the energy and dispatch it as needed. Rondo Energy is one of the companies working to produce and deploy thermal batteries.

What is a thermal energy battery?

A thermal energy battery is a physical structure used for the purpose of storing and releasing thermal energy. Such a thermal battery (a.k.a. TBat) allows energy available at one time to be temporarily stored and then released at another time.

Will thermal energy storage be cheaper than lithium-ion batteries?

CSIRO, Australia's national science agency, estimates that thermal energy storage will be roughly a third cheaper than both lithium-ion batteries and pumped hydro for storage longer than four hours by 2050. This is the chiller room at The Well.

What are some sources of thermal energy for storage?

Other sources of thermal energy for storage include heat or cold produced with heat pumps from off-peak, lower cost electric power, a practice called peak shaving; heat from combined heat and power (CHP) power plants; heat produced by renewable electrical energy that exceeds grid demand and waste heat from industrial processes.

What are the different types of thermal energy storage?

The different kinds of thermal energy storage can be divided into three separate categories: sensible heat, latent heat, and thermo-chemical heat storage. Each of these has different advantages and disadvantages that determine their applications. Sensible heat storage (SHS) is the most straightforward method.

How do you store a thermal battery?

Heat up a material, such as water or other substances that get much hotter, including graphite, sand or molten salt -- up to 1,700 C, according to a recent report on industrial thermal batteries by the U.S. think-tank Energy Innovation. Store it in a way that minimizes heat loss, such as in an insulated container, or underground.
